# SYNOPSIS

## What's an LMS?

Everything you always wanted to know about Learning Management Systems  
(but were afraid to ask)

You've conquered the fax machine. The mobile phone has no secrets from you. You rock a PDA with the best. And you've mastered surfing on this new-fangled word wide web. Still there are some concepts that elude you, like this LMS topic people keep bringing up in business discussions and off-site meetings. You know it's hot stuff, but what it is? Well, today's your lucky day, because that's exactly what we're here to shine light on.

LMS stands sort for Learning Management System.

Learning, because you use it to deliver education courses or training programs.

Management, because it helps you organize these courses (create them, change them, assign them to students, grade them, etc).

System, last but not least, is just a fancy word that translates to "software". An LMS is a computer program.

Just like Word helps you write documents and Gmail helps you manage your emails, an LMS is a software program that helps you create, manage and deliver eLearning courses. An LMS is the "engine" that powers eLearning, and in the most common form it consists of two separate parts:

- A server component that performs the core functionality (creating, managing and delivering courses, authenticating users, serving data and notifications, etc.)
- A user interface that runs inside your browser as a web (like Gmail or Facebook), that is used by administrators, instructors and students.

## SPEAKER

Teng Mun brings with him over 25 years of experience in IT related industry in regional sales, marketing and management roles for market leaders and multinational corporations.

He has strong domain knowledge in various vertical industries including services, technology, training and manufacturing. His experience includes systems integration, solution sales management in large corporate customers, and the development and management of training and channel partners.

He is an active management executive, currently the Executive Director for e-doceo Asia, responsible for Asia growth and expansion. Prior to this, Teng Mun has held numerous management positions with companies including Intel, Microsoft, Moduslink and John Wiley. He has also been an independent consultant to several companies, in sales and business coaching.

Teng Mun holds a Bachelor of Science in Computer Science and Mathematics from University of Alberta, Canada
